SUMMARY

Software Engineer with 4 years of experience building scalable backend systems and production AI applications, including LLM-based agentic workflows. Currently pursuing an M.S. in Computer Science at UMass Amherst, focused on Machine Learning and AI.

EDUCATION

University of Massachusetts Amherst

Master of Science (M.S.) in Computer Science

Amherst, Massachusetts, USA

September 2026 – May 2028

- Relevant Coursework: Machine Learning, Neural Networks, Information Retrieval

Indian Institute of Technology (IIT) Roorkee

Integrated M.Sc. in Applied Mathematics (Mathematics & Computing), CGPA: 8.219

Roorkee, India

July 2017 – May 2022

- Relevant Coursework: Computer Programming, Data Structures, Design and Analysis of Algorithms, Database Management Systems, Linear Programming, Artificial Neural Networks, Evolutionary Algorithms

EXPERIENCE

AI Engineer

ThirdAI Automation Inc

May 2025 – June 2026

- Developed and deployed multi-agent AI pipelines (Triage → RAG → Analysis → Visualization) to automate root cause analysis in utility and semiconductor domains, cutting manual analysis time by 60%
- Engineered scalable backend architecture with MongoDB for persistent memory and Neo4j for graph-based reasoning, enabling multi-hop contextual reasoning and reducing retrieval latency by 40%.
- Designed agentic workflows for LLM-driven code generation and data science automation, automating manual processes and increasing task throughput by 45%

Senior Software Engineer

NEWME Pvt. Ltd., Bengaluru, India

Sept 2023 – May 2025

- Engineered cart recommendations, couponing, and abandoned cart notification systems, contributing to a 50% increase in daily order value.
- Scaled backend infrastructure to handle 80× traffic under peak load while implementing SQL injection prevention and rate limiting.
- Integrated ClickHouse for real-time user-action analytics and built integrations with GrowthBook, MSG91, and Delhivery to support experimentation, communication, and logistics workflows.

Software Engineer

Myntra Designs Pvt. Ltd., Bengaluru, India

June 2022 – Aug 2023

- Built and maintained backend features for time-based commissions and incentives across product hierarchies.
- Revamped backend APIs by resolving caching-layer issues and latency-spiking calls, reducing response times by 90% while preserving existing functionality.
- Built backend microservices in Golang, Kotlin, and Java for seller tiering, partner communication, and onboarding workflows.

TECHNICAL SKILLS

Languages: C++, Python, Java, Kotlin, Golang, PL/SQL, Bash

Frameworks/ML: Flask, FastAPI, PyTorch, TensorFlow, Scikit-learn, Pandas, NumPy, Hugging Face, Matplotlib

Databases/Tools: MySQL, MongoDB, DynamoDB, Redis, ClickHouse, Neo4j, AWS, Git, Jupyter
